#### **DETAILED ACTION**

## **Drawings**

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the actuator attached to the chassis as claimed in claims 8 and 19 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

## Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Regarding claims 1, 13 and 20, the grammatical construction of each of these claims is such that they appear to recite that the control arm has the "selectively moveable intermediate attachment point thereof disposes between the inboard and outboard ends of the control arm..." This limitation is confusing because the moveable attachment point, as disclosed, is not part of, or on the control arm, but rather on another member, i.e. the articulating element. For the purposes of examination, it will be assumed that what is intended is that the selectively moveable intermediate attachment point is located in space between the inboard and outboard ends of the control arm, and is attached to an element that is attached to the control arm, and moves in relation to the control arm. Further regarding claims 17-19, "the linear actuator" lacks antecedent basis, since the actuator of claim 13 was never previously recited as linear.

#### Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Art Unit: 3616

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Page 4

5. Claims 1- 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Melcher (US 6,805,362 B1.) Melcher teaches (Figure 3a and col. 5, lines 27-47) a suspension apparatus including a control arm (36) having an inboard end adapted for articulated attachment to the chassis (at 72, via 54 and 57) and an outboard end attached to the wheel (at 42) and as best understood including a selectively moveable intermediate attachment point (75) for attachment of a compressible suspension element (48) that is articulated at an upper end to a chassis and at a lower end to the attachment point and includes both a spring and a damper. Also taught is an actuator (51) that selectively moves the attachment point (see col. 5, lines 33-36.) Regarding claim 6. Melcher teaches that the actuator can be a linear actuator attached to the control arm (see col. 7, lines 43-45.) Regarding claim 8, the actuator is attached to the chassis via the lower control arm (see col. 7, lines 43-45.) Regarding claims 7 and 9, the motor is electrical. Regarding claim 10, the actuating arm (57) can fairly be termed the articulating element. Regarding claim 11, the attachment point is above the center line of the control arm, as seen in Figure 2a. Regarding claim 12, the attachment point is below the center line of the control arm, as seen in Figure 3s.)

#### Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Howells et al., Smyers, Fujita et al., and Lee teach adjustable suspension systems of interest.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ruth Ilan whose telephone number is 571-272-6673. The examiner can normally be reached on Monday-Friday, 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Dickson can be reached on 571-272-6669. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
